

Repairs to DCR Roofs, Structures on the Roofs, and Improvement of Drainage for Roofs

Contractor tasks:

- 1) Repair and seal all roof penetrations to include around cabling, electrical wiring, etc.
- 2) Repair and seal all domes with Embassy approved materials
- 3) Repair and seal all parapet walls. All loose materials will be removed and surfaces cleaned before re-sealing
- 4) Repair all windows and window frames. The four windows at the top of largest dome will be made operable.
- 5) Metal window frames will be cleaned, anti-rust coating applied and painted white.
- 6) Existing window panes will be replaced with 4-5 mm plexiglass and new glazing applied.
- 7) Existing roof drains will be enlarged to ~15 cm diameter and new screening installed to cover the openings.
- 8) All walls, chimneys, and domes will be painted white
- 9) Contractor staff will utilize required safety equipment to include, but not limited to the following: fall protection harnesses for all workers working on the roofs; steel or composite toed shoes or boots for all personnel; eye protection for all personnel appropriate for task performed (laborer, welder, cutting steel, etc); helmets; gloves; etc
- 10) Remove any and all materials and debris at completion of construction
